BARRETT PINET ARCHITECTURE

Research, Sketch Design

The brief was to reuse an existing industrial shed and fit it out to create an interactive Science Museum based on a more modest model of La Villette. The proposal is to create a new and flexible facade in front of the shed, on which different elements relating to the exhibitions can be hung or attached. Internally all secondary functions sit around the periphery to allow maximum exhibition area. The park adjacent was also to be fitted with educational games using timber structures.
